(54) LIGHT TRANSMISSION SHEET AND ITS  
PRODUCTION, BACK LIGHT FORMED BY USING  
THIS LIGHT TRANSMISSION SHEET AND LIQUID  
CRYSTAL DISPLAY DEVICE FORMED BY USING  
THIS BACK LIGHT

(57) Abstract:

PURPOSE: To provide a liquid crystal display device with which image display having uniform brightness and high luminance is obtainable as a liquid crystal display device formed by using a back light for which a light transmission sheet to transmit the light from a light source to a liquid crystal display panel is used.

CONSTITUTION: The light transmission sheet 1 is formed by laminating 2 kinds of transparent amorphous layers varying in refractive index at prescribed angles with the sheet surface 8. The light transmission sheet 1 is so constituted as to be used for the back light.
